March 19, 2001

TO: GIACOMO BONANNO
   Department of Economics

   KEVIN HOOVER, Chair
   Department of Economics

FROM: C. CHRISTOPHER CALVERT, Chair
   Graduate Council

SUBJECT: Graduate Program in Economics – Changes to Ph.D. degree program requirements

At its meeting of March 14, 2001 the Graduate Council considered and approved the graduate program in Economics’ request for changes to its Ph.D. degree program requirements. The Educational Policy Committee (EPC) Chair reported that EPC supported the proposed changes and recommended Council’s approval. He reported that the changes were made in response to the March 28, 2000 Program Review Committee Report and most were intended to reduce the average time taken for the Ph.D. students to advance to candidacy. Thank you for providing EPC with the revisions and clarifications of the proposed changes that it requested.

Please send a copy of the entire Graduate Handbook with both the M.A. and Ph.D. degree requirements that includes the approved Ph.D. program changes to Lee Wilce in the Office of Graduate Studies. The document will be added to the program’s degree requirements file that is maintained by Graduate Council.

/lsw

    J. Hedrick
    R. Kraft
Dear Lee,

As requested by the chair of Graduate Council in his letter of March 19, 2001, I am enclosing a copy of the entire Economics Graduate Handbook (with both the MA and PhD degree requirements, including the recently approved PhD program changes).

Sincerely,

Giacomo Bonanno
Graduate Program Chair
University of California, Davis
Department of Economics
Graduate Handbook
2001-2002

If you are a continuing student and want to consult an older version of the graduate handbook choose one of the following: 1998-1999, 1999-2000, 2000-2001

There are 24 permanent faculty members and approximately 70 graduate students in the Department of Economics. The department’s objective is to balance the size of the program to permit the offering of a full complement of courses while retaining the informal, personal guidance of graduate students that has been a hallmark of the program since its establishment in 1964.

Although the department offers both MA and PhD degrees, the emphasis is on the PhD program. Prospective students are expected to apply to the PhD program and admission is to the PhD program. Students have the option of obtaining an MA degree enroute to the PhD or they can choose to leave the graduate program with an MA degree at the end of the first year, provided that they have fulfilled the necessary requirements (see below).

The following detailed list of requirements for the Ph.D. degree and satisfactory progress along the way have been developed with the goals of both successful job placement and timely completion of the Ph.D. degree. The preliminary exams in microeconomics and macroeconomics are completed at the end of the first year and remaining required coursework is completed at the end of the second year. The third year is devoted to development of a thesis prospectus (explained below), aided by attendance and participation in the many department seminars and workshops and interaction with relevant faculty. Once the oral qualifying exam, based on the thesis prospectus, is passed, the remainder of the time is devoted to writing of the thesis and further development as a scholar through seminar attendance and participation.

GRADUATE ADVISING

Each graduate student is assigned a graduate adviser who provides assistance in planning a program of study and in other matters. In addition, each PhD student selects an Interim Adviser after completion of the preliminary examinations, and a thesis committee upon advancement to candidacy.

The Graduate Studies Committee is composed of the graduate program chair, two other faculty members, and three graduate students. While the faculty members administer the program, the entire committee is responsible for the consideration of policy. A student who wishes to fulfill degree requirements in a manner other than described in this Handbook must submit a request in writing to the graduate program chair. Inquiries may be addressed to the graduate secretary, Marilyn Dexter.

RETURN TO INDEX

BEFORE THE FIRST YEAR BEGINS

Pre-admission requirements: Students admitted to the graduate program in economics are normally expected to have completed an undergraduate degree in economics. (The minimum requirement is intermediate microeconomics and macroeconomics plus two upper division courses in economics.) Entering students are also expected to have completed two courses in college statistics (at least one at the upper division level) and one year of calculus prior to admission. They are also strongly encouraged to have completed a course in linear algebra. This basic mathematical preparation is critical to a successful first year.

GRE scores for applicants: Applications to the graduate program in the Economics department at UC Davis will NOT BE CONSIDERED if:

1. The GRE Verbal score is less than 60% (for international students: if it
is less than 30%

OR

2. The GRE Quantitative score is less than 70%

OR

3. The GRE Analytical score is less than 70%

Additional requirement for international students:

4. The TOEFL score must be greater than 600 points.

September lectures in mathematical methods: The department offers an intensive series of Lectures in Mathematical Methods beginning after Labor Day (early September). These lectures focus on differential calculus and linear algebra, building upon rather than sufficing for the undergraduate preparation described above. The lectures emphasize the specific tools used in the required first-year micro, macro, and econometrics courses, and all students in these courses will be assumed to have mastered the material covered in the September lectures. Therefore, while these lectures are informally structured (registration and the payment of fees are not required), all students—including those with extensive coursework in mathematics—should attend.

RETURN TO INDEX

THE FIRST YEAR IN THE GRADUATE PROGRAM

Every first-year student, no matter what his/her degree objective, is required to take the following courses:

1. **Microeconomic Theory**: Economics 200A (Fall Quarter), 200B (Winter Quarter) and 200C (Spring Quarter), or successful completion of the Microeconomic Theory preliminary exam.

2. **Macroeconomic Theory**: Economics 200D (Winter Quarter) and 200E (Spring Quarter), or successful completion of the Macroeconomic Theory preliminary exam.

3. **Econometrics**: Statistics 133 (Fall Quarter), Economics 240A (Winter Quarter) and Economics 240B (Spring Quarter).

Core theory prelims: All first-year students must pass written preliminary examinations ("prelims") in Microeconomic Theory (covering Economics 200A,B,C) and in Macroeconomic Theory (covering Economics 200D,E). The core theory prelims should be taken in late June/early July immediately following the first year.

Prelims are "closed book" and are graded on a 0-4 numerical scale as follows:

Fail (0-1.79)
Pass at the MA Level (1.80-1.99)
Pass at the PhD Level (2.00-2.99)
Good (3.0-3.99)
Excellent (4.00-5.00).

Grades of 3.0 or above reflect unusually good performance; grades of 4.0 or above (indicating truly distinguished performance) are quite rare. All exams are graded by two (or, if necessary, three) faculty members. Students may read the examiners' comments by contacting the graduate secretary.

Retaking core theory prelims and time limits: To allow for instances in which a core theory prelim is not passed at the first attempt (or for unusual situations beyond the student's control), the exams may also be administered in September. Students may re-take each exam not more than once, that is, only two attempts are allowed for each exam.

The FIRST YEAR course schedule is thus as follows:

<table>
<thead>
<tr>
<th>Fall Quarter</th>
<th>Winter Quarter</th>
<th>Spring Quarter</th>
<th>June/July</th>
</tr>
</thead>
<tbody>
<tr>
<td>Economics 200A</td>
<td>Economics 200B</td>
<td>Economics 200C</td>
<td>micro prelim</td>
</tr>
<tr>
<td>Statistics 133</td>
<td>Economics 200D</td>
<td>Economics 200E</td>
<td>macro prelim</td>
</tr>
<tr>
<td>Elective</td>
<td>Economics 240A</td>
<td>Economics 240B</td>
<td></td>
</tr>
</tbody>
</table>

The elective should be at the graduate level in economics (or agricultural economics) or at the upper division or graduate level in mathematics or statistics. It is often used to fulfill the requirement in Economic History/History of Economic Thought.

Students who are Teaching Assistants during the Fall Quarter are allowed to postpone taking the elective until the second or third year (thus limiting themselves to Ecn 200A and Stat 133; to fulfill the unit requirements for a full time student they can enroll in Ecn 299 with the professor for whom they work as TAs).
(Students whose degree objective is the MA only, can fulfill the unit requirements for a full time student during Fall Quarter by enrolling in Ecn 299 with the chair of the Graduate Studies Committee.)

Registration requirements
Students must register for a minimum of 12 units per Quarter, including Individual Study (Economics 299) where appropriate.

AT THE END OF THE FIRST YEAR

1. A student who has completed the first-year courses (Stat 133, Ecn 200A,B,C,D,E, Ecn 240A,B) with a GPA of at least 3.0, and passed both micro and macro prelims can obtain an MA degree. Applying for a Master's degree does not preclude remaining in the PhD program, as long as the requirements for good standing in the PhD program are met (see
2. In order to remain in the PhD program at the end of the first year, the student must meet the following requirements: completion of the first-year courses (Stat 133, Ecn 200A,B,C,D,E, Ecn 240A,B) with a letter grade of B- or better in each course, a cumulative GPA of at least 3.25 and a grade of "pass at the PhD level" or better in both micro and macro prelims. If the first-year cumulative GPA is below 3.25 (but above 3.0) and the student has passed both micro and macro prelims with a grade of "pass at the PhD level" or better and each first-year course was passed with a letter grade of B- or better, he/she may petition the graduate program chair to remain in the PhD program. After a review of the student's complete record, the student will be given a specific number of quarters (typically one) to increase the GPA to at least 3.25. If the cumulative GPA remains below 3.25 after that time, the Graduate Studies Committee may recommend that the student be dismissed from the graduate program with an MA degree.

3. A student who, before the beginning of the second year, fails to meet the requirements listed under point 2 above must leave the graduate program. This requirement may be waived on petition to the Chair of the Graduate Studies Committee if the student can prove adequate grounds. If the student fulfills the requirements listed under point 1, he/she can leave with an MA degree; under special circumstances he/she can apply to the Graduate Studies Committee chair for permission to remain in the program as an MA student and spend a second year taking field courses.

RETURN TO INDEX

THE PhD PROGRAM AFTER THE FIRST YEAR

The PhD degree requirements after successful completion of the first year are:

- (a) preliminary examinations in two elective fields of specialization, plus two additional courses in a third elective field, in the second year,
- (b) submission of a paper or in-depth literature review by the end of the Summer following completion of the second year,
- (c) an oral PhD qualifying examination by May 15th of the third year,
- (d) regular seminar attendance,
- (e) at least one seminar or workshop presentation by April 30th of the fourth year,
- (f) the thesis, and
- (g) a total minimum residency of at least two years.
A student may elect to take at most one course per quarter on an S/U basis (in addition to any courses normally graded on an S/U basis) provided that it does not fulfill any of the degree requirements. Many students use the S/U option when taking optional courses outside economics (such as Math 127A, B, C). (It is stated in the General Catalog that "the grade of S is awarded to graduate students for work in graduate courses that otherwise would receive a grade of B- or better and for work in undergraduate courses that otherwise would receive a grade of C- or better").

A student may satisfy the requirements as listed in any single Graduate Handbook in effect while registered in the graduate program, as long as registration is continuous.

**COURSE SCHEDULING FOR PhD STUDENTS in the SECOND YEAR**

In the second year the student completes all course requirements and prelims while attending seminars for at least one quarter:

<table>
<thead>
<tr>
<th>Fall Quarter</th>
<th>Winter Quarter</th>
<th>Spring Quarter</th>
<th>June/July</th>
</tr>
</thead>
<tbody>
<tr>
<td>Field Course</td>
<td>Field Course</td>
<td>Field Course</td>
<td>field prelim</td>
</tr>
<tr>
<td>Field Course</td>
<td>Field Course</td>
<td>Field Course</td>
<td>field prelim</td>
</tr>
<tr>
<td>Write-Off Course</td>
<td>Write-Off Course</td>
<td>Elective\Ecne 299</td>
<td></td>
</tr>
</tbody>
</table>

The order in which the write-off courses and the elective\Ecne 299 are taken is immaterial (e.g. the student could take the elective in Fall and the write-off courses in Winter and Spring).

The normal course-load is three courses per quarter. If one of the fields consists of only two courses, the student can choose to take any other graduate-level economics course in the remaining quarter.

If one of the fields in which the student is interested in is not offered in the student's second year, the student can petition the graduate program chair to postpone taking that field to the third year. The petition must be in writing at least one week before the beginning of Fall Quarter.

Students are required to submit by the September 30 following completion of two years of graduate work a paper or in-depth literature review on a topic of their choice, preferably in the area of one of the two fields. The paper/survey should be approximately 20-pages (double spacing, 12 pts), show a clear understanding of the topic chosen and possibly contain the seeds of the student's future research project. It is evaluated by a committee of two faculty members. The grading is on a pass/fail scale. A paper submitted as part of the requirements for one of the field courses, cannot be resubmitted unless it incorporates a substantial amount of new material.

After the second year, students are primarily involved in thesis research,
attending seminars regularly (at least two quarters each year) and registering for electives or Individual Study (Economics 299) as appropriate. A student pursuing thesis research full-time should aim to complete the degree by the end of the fourth year.

Students are expected to complete their degree within the "normative time" of five years.

**Students Specializing in Mathematical Economics or Econometrics**

Students who plan to write a thesis in Economic Theory should take course work in real analysis (Math 127A,B,C). Real analysis is very useful in Economics 203A,B,C and is helpful, more generally, in building the mathematical sophistication necessary to do modern microeconomic theory and theoretical econometrics.

Students who plan to write a thesis in theoretical econometrics should take Statistics 131A,B,C and 230. Statistics 131A and one upper division course in statistics (such as Statistics 131B) will be accepted in lieu of Statistics 133.

In both cases, scheduling considerations will be important, and it is critical that students discuss their plans with an instructor in the field.

**A. Fields of Specialization**

Each student must qualify in three of the following fields of specialization:

- Advanced Economic Theory (203A,B,C)
- Econometrics (240C,D,E)
- Economic Development, available only as a write-off field (any two courses from 215A,C,D)
- Economics of Growth (270A,B,C) [it will be available starting from Fall 2001]
- Economic History (210A,B,C)
- Economy, Justice & Society (209A,B,C)
- Industrial Organization (221A,B,C)
- International Trade (260A,C,E)
- International Macroeconomics (260B,D)

International Economics (260A,B,C) [Note: a student taking a prelim in International Economics cannot also take a prelim exam in International Trade or in International Macroeconomics. On the other hand, it is possible to take a prelim in International Trade and also a prelim in International Macroeconomics]
Labor Economics (250A,B)

Monetary Economics (235A,B,C; or, for those not taking International Macroeconomics as a field, 235A,B and 260B)

Public Economics (230A,B,C)

**Elective field prelims:** All courses in the elective fields must be passed with a letter grade of B- or better. Of the three elective fields, two must be passed by written prelims, which are based on the material in the courses listed in parentheses. *These elective prelims are taken in late June/early July immediately following the completion of the second year.*

**Retaking elective prelims and time limits:** To allow for instances in which a prelim is not passed at the first attempt the exams may also be administered in September *only* for students needing a second chance after a Spring failure. Students may sit for each elective prelim no more than twice, and no student will be allowed to take field prelims in more than three elective fields. *In all cases, retakes must be completed not later than the Spring following the initial failure.*

The failure of a prelim in a field will not prejudice the selection of that field as a write-off field. A student who fails any PhD prelim (other than the core theory prelims) may be asked to leave the program with an MA degree (provided that the requirements for an MA degree have been fulfilled).

**Economics write-off fields:** The third ("write-off") field may be completed by passing with a letter grade of B- or better two graduate courses in that field. These two courses must be in addition to those used to satisfy the core economic history/history of economic thought requirement and must not be a component of the subject matter for the two prelims. Subject to that constraint, History of Economic Thought (201A,B) satisfies the write-off requirement.

**Alternative write-off fields:** Students may also satisfy the write-off field requirement by choosing courses to suit a specific interest in economics or in a related discipline, *subject to the written approval of the chair of the Graduate Studies Committee prior to taking the relevant coursework.* In recent years course sequences in the Graduate School of Management (Management 275A,B: Capital Markets and Corporate Finance), in the Law School (Contracts; Antitrust), in the Department of Agricultural and Resource Economics and in the Department of Mathematics have been approved as write-off fields. (Because of registration restrictions and differences in the academic calendar, special arrangements must be made to take law courses.)

**B. Initiating Thesis Research**

The department takes particular interest in helping students initiate thesis research, and several programs are available to students.
Seminar and "brown-bag" attendance is critical to obtaining thesis ideas, maintaining contact with faculty members, and seeing how research presentations are made. Seminar series are offered throughout the year in economic theory, applied microeconomics, economic history, macro/international and economic history, featuring presentations by faculty, students, and outside speakers. Students are expected to attend these seminars according to the following rules:

1. Every graduate student, with the exception of first-year and second-year students, is required to attend at least 5 seminars of his/her choice every Quarter.
2. If a graduate student gives a seminar or a brown bag presentation he/she can count it towards the above requirement.
3. The seminar organizer will circulate a sheet of paper to be signed by the graduate students who attended the seminar. The seminar organizer will then pass it on to the graduate secretary who will keep track of how many seminars each student has attended in each quarter.
4. If a student (again, with the exception of first and second year students) is enrolled in a 299 in a given quarter and he/she has not attended at least 5 seminars during that quarter, then he/she will get a grade of Unsatisfactory (or No Pass) in that 299. [Thus the faculty involved in 299 will have to check with the graduate secretary before completing the grade sheet].
5. The above requirement of 5 seminars per quarter is the absolute minimum. Students are strongly encouraged to attend more than the minimum. Seminar attendance is strongly recommended also to first and second year students.

In addition, graduate students organize the Summer In Davis Economic Workshop ("SIDECOW"), providing an additional forum for discussing ongoing research.

An interim adviser will assist the student in formulating a research agenda, preparing for seminar or workshop presentations, and writing the thesis prospectus. The Interim Adviser need not necessarily serve later on the thesis committee, and a new Interim Adviser may be substituted if the direction of the student’s research changes. Each student should select an Interim Adviser no later than the January 15 following completion of the last prelim. Students finding it difficult to select an Interim Adviser should consult with the graduate program chair for assistance.

Seminar and workshop presentations are excellent ways to receive feedback and to gain experience in making presentations. As thesis research develops, the student should schedule a presentation in the appropriate seminar series. Each student is required to make at least one presentation (see below).

C. The Oral Qualifying Examination and Advancement to Candidacy

The thesis prospectus: The Interim Adviser helps the student prepare the
thesis prospectus, which should be approximately 20 double-spaced pages in 12 point fonts. The prospectus should outline clearly the intellectual content of a central chapter of the thesis by including (1) a clear exposition of the problem and a statement of what is new in the proposed research, (2) an indication that the student has read the literature enough to know whether the proposal is really new, and what significant problems are likely to be encountered, (3) a discussion of the relevant methodologies, and (4) a confirmation of the availability of usable data (if relevant). Approximately three pages of the prospectus should also contain an indication of what would constitute the remaining part of the thesis.

The oral qualifying examination is scheduled after the Interim Adviser has approved the thesis prospectus and all other pre-thesis degree requirements have been satisfied. Questions will be related chiefly to the thesis, with the goal of confirming that a viable topic has been identified and that the student will be able to pursue the topic to successful completion using the proposed methodologies. The oral is a constructive exercise designed to provide guidance to the student in research, and many students choose to tape-record the proceedings for later review.

Typically, the oral exam will last between one and two hours.

The examination committee will consist of five members of the Economics Department. Sometimes a person with special expertise from another UC Davis department or UC campus can be invited to be one of the five members of the examination committee. All members of the orals committee must hold PhD degrees and must be professors from a UC campus unless the Interim Adviser secures a waiver from the Dean of Graduate Studies. The same person may not serve as both the chair of the oral and the chair of the thesis committee. A student must be registered during the quarter in which the exam is taken (Spring registration includes the following summer).

Scheduling and deadlines: Orals are scheduled only after the proposed thesis committee chair has approved a final draft of the thesis prospectus (or a penultimate draft on which the student is to make specified minor changes). The Request to Schedule Oral Examination form must then be submitted to the graduate secretary at least one month prior to the examination date. The final prospectus must be distributed to the oral examination committee not later than two weeks before the oral. Students should consult with the graduate secretary for help with scheduling the exam date. The prospectus should be submitted by April 15th of the third year and the oral exam should take place by May 15th of the same year.

Advancement to candidacy: The student may file for advancement to candidacy upon completion of the oral and all other degree requirements except the thesis. An Application for Advancement to Candidacy must be submitted to the Office of Graduate Studies and approved by that office before advancement occurs.

International students advanced to candidacy before the first day of a quarter are entitled to a 75% reduction in nonresident tuition. See below under financial aid for details.
D. The Thesis

The thesis (dissertation) is the means by which candidates demonstrate research proficiency. Upon advancement to candidacy, the student will assemble a thesis committee consisting of three faculty members, chaired by the student's major professor, to direct the research. All three committee members must hold PhD degrees and must be professors from a UC campus unless the major professor secures a waiver from the Dean of Graduate Studies. Students should consult with the graduate secretary regarding thesis format and submission guidelines.

Verification of progress. By April 30th of the fourth year every student is required to give a progress seminar on his/her research. The purpose of the seminar is to show that substantial progress has been made since the PhD qualifying exam. The three members of the dissertation committee and at least one other faculty member (typically a faculty member who took part in the PhD qualifying examination) will be expected to attend the seminar. At least two weeks before the seminar the student should submit a written paper of at least 20 double-spaced pages to the members of the dissertation committee and the fourth faculty member who will attend the seminar. The paper should contain all or most of the material on which the seminar will be based.

Students admitted before Fall Quarter of 2001 are grandfathered and may follow either the new rules or the old rules. The Chair of the Graduate Studies Committee is authorized to use discretion in allowing further exceptions for such students in the interest of fairness and conformity with rights that students may have under University regulations.

Students who complete the various requirements by the specified deadlines will be deemed to be making satisfactory progress towards their degrees and will accordingly receive favorable consideration when TAships and fellowships are awarded.

E. Registration and Scholarship Requirements

Students must register for a minimum of 12 units each Quarter, including Individual Study (Economics 299) where appropriate. A minimum overall GPA of 3.25 is required for good standing in and for successful completion of the PhD program.

If the cumulative GPA falls below 3.25 for two consecutive quarters, the student may be asked to meet with the graduate program chair. After a review of the student's complete record, the student will be given a specific number of quarters to improve the GPA. If the cumulative GPA remains below 3.25 after that time, the Graduate Studies Committee may recommend that the student be dismissed from the PhD program (with an MA degree if the corresponding requirements are met).
F. Time Limits for Completion of Degree Requirements and Readmission

(Note: these are mainly university time limits and it is hoped and expected that student progress will be substantially faster than this)

**Five-Year Rule for advancement to candidacy:** A student is expected to be advanced to candidacy by the end of the fifth year, after which time registration will not be allowed except for the quarter in which orals are taken.

**Three-Year Rule for completion of the thesis:** A student who is advanced to candidacy may go on filing fee status while completing the thesis. Filing fee status will expire three years after the end of the quarter during which the oral exam was passed (but not before the end of the seventh year). After that time, the student may apply for an extension on an annual basis if the major professor certifies that significant progress is being made. Once the time limit (with extensions) is exceeded, filing fee status will automatically lapse. Similarly, students who break registration (without going on PELP or filing fee status) lose their student status.

**Readmission after an absence:** A student wishing to re-enter the program after a break in registration or after a lapse in filing fee status must file an application for readmission for the following fall, subject to normal admissions deadlines. Readmission (if granted) may be conditional on retaking the oral and/or satisfying any new course or programmatic requirements then in effect.

RETURN TO INDEX

INTERDISCIPLINARY PROGRAMS
The department strongly promotes interdisciplinary study and research. The following interdisciplinary programs are available.

(1) ECONOMY, JUSTICE, AND SOCIETY

The Program in Economy, Justice, and Society promotes the study of questions lying at the intersection of economics, political science, and philosophy. It sponsors lecture series, seminars, conferences, and a curriculum leading to a PhD degree in economics with a Designated Emphasis in Economy, Justice, and Society. Questions should be directed to the EJS director Joaquim Silvestre.

For those electing to pursue this designated emphasis the PhD degree requirements are modified as follows:
Core courses: In addition to the standard core requirements, Philosophy 118 (Political Philosophy) is recommended.

Prelims and fields of specialization: One of the two prelims must be in the field of Economy, Justice, and Society (Economics 209A,B,C). In addition, the write-off field requirement must be satisfied by taking two courses from the following three groups of courses, with at most one from each group:

I. Philosophy: Philosophy 217 (Political Philosophy).

II. Political Science: Political Science 217 (Introduction to Social Choice Theory and Spatial Modeling) or Political Science 274 (Political Economy).

III. Sociology: Sociology 215 (Economy, Polity and Society).

Initiating thesis research: The student must complete one quarter of EJS 207 (Interdisciplinary Social Analysis), a team-taught interdisciplinary course, in lieu of (or in addition to) attending an economics seminar series. The student must also present a seminar, based on original work, in a later quarter of EJS 207, although registration in the course is not necessary at that time.

The thesis must be in the general area of Economy, Justice, and Society. Normally the student and graduate adviser will consult on this, subject to the approval of the EJS Graduate Committee.

All other degree requirements are as described for the PhD program in economics.

(2) SOCIAL THEORY AND COMPARATIVE HISTORY
Through a combination of seminars and examinations, doctoral students may pursue a Designated Emphasis in Social Theory and Comparative History. This UC Davis program offers a supplementary degree certification based on an interdisciplinary program of study. For further information: http://chsc.ucdavis.edu/STCHprogram.html.

FINANCIAL ASSISTANCE for current graduate students

Information on deadlines and application requirements will be provided in January.

California residency for tuition purposes: Nonresident domestic students (US citizens and permanent residents) should take steps to be classified as California residents by the end of their first year.
Limits on appointments: Graduate students may hold academic appointments (including TA, RA, Reader, Associate-In, or Student Postgraduate Researcher) during their 13th quarter in residence (excluding summers) only if they have advanced to candidacy. Appointments for those advanced to candidacy are subject to limits of 15 quarters of service which apply separately to teaching (TA and Associate-In), research (RA and Student PGR), and reader titles. Appointment beyond the 15 quarter limit requires a letter of exception.

Fellowships

Continuing students (both foreign and domestic) and new domestic students may apply for fellowships, which provide a stipend and/or remission of fees.

Nonresident Tuition Fellowships and Reduced Nonresident Tuition

Continuing foreign students and entering domestic students who are not residents of California may apply for Nonresident Tuition Fellowships which provide for the full or partial remission of the nonresident tuition fee. NRTF’s are offered to continuing foreign students on the basis of scholarship and progress in the graduate program.

International students who have been formally advanced to candidacy before the first day of a quarter are entitled to a 75% reduction in nonresident tuition for a maximum of 3 calendar years (regardless of registered quarters) after first being advanced to candidacy. Because of the availability of this support, NRTF awards will not exceed 25% of full nonresident tuition after the fall quarter of the 4th year in residence.

Teaching Assistantships

TA’s work with faculty members in Economics 1A and 1B (Principles of Economics) and in some upper division and graduate courses. They are generally assigned responsibility for two discussion sections per quarter. TA support to continuing students is offered on the basis of progress in the graduate program, scholarship, and teaching performance.

Research Assistantships and Work-Study Funding

Research assistant positions are generally offered to more advanced students. Some work-study funding may be available for domestic students.

RETURN TO INDEX

PLACEMENT

Each October the department assists students in finding permanent employment by compiling a list of PhD students who have passed their oral qualifying exam, and by aiding students in sending individual job applications to potential
employers. Students who have not passed their orals may, of course, go on the job market, but the department does not consider a student fully ready to do so until advanced to candidacy.

For a list of students who obtained their PhD between 1990 and 1999, together with information about their first job click on the following link: Placement record of PhDs 1990-1999.

For a list of students who obtained their PhD after 1999, together with information about their first job click on the following link: Placement record of PhDs from 2000.

RETURN TO INDEX
